Agricultural Farm Management Tool (AFMT)

AFMT is a farm management system that facilitates to monitor the agricultural land and enables its owner to efficiently plan to carry out agricultural operations systematically and efficiently.

AFMT provides real-time updates on current field and its crop status including production, expenses and sales on the same.

AFMT has the capability to manage one or more farms of various places with accurate capture and monitor of the farm names, employees, crops, expenses, sales, clients, reports etc.

AFMT is a cloud hosted farm management one stop solution which allows the farm owner, managers to login and provides more visibility on the day-to-day activities carried out on one or more farms such that it helps to plan the cropping according to the expenses v/s sales.

Also enables to generate the invoice over the different crops with different prices, quantity, grade etc according to the clients already registered. Enables the search, dashboard and reports to plot the future planning on crops as per the market strategy and thus increases the profit.

Benefits to the Organization

- Operational Ease
- Facilitates the summary of the farm activities to farm owner and managers
- Different masters which allows to upload the data quickly and conveniently
- Workplan against crop of the farms can be easily plotted
- Easy Employee attendance marking
- Generate Invoice for the crop production on the required customized parameters
- Dashboard view on the masters, workplan and sales v/s expenses

Farm owner and his managers can get complete summary and output on the farm activities with Sales v/s Expenses
